Amendments to the Claims;

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1-6. (canceled)

- 7. (currently amended): A method of selecting subjects suffering from a proliferative disease for treatment with an mTOR inhibitor and a cylotoxic agent, <u>said method</u> comprising determining the sensitivity of the proliferative disease to the treatment in said subjects by <u>determining the presence of the wild type p63 (7P53) gene</u>, a mutated p53 (7P53) gene, or the absence, <u>deficiency or deletion of the of p53 (7P53) gene and/or the level of expression/post-translational modification of p53 in a sample derived from the subject, the method described in claim 3, and selecting said subjects showing wild-type p53 (7P53) status for treatment.</u>
- 8. (currently amended): A method according to claim \$ \(\Z \), wherein the mTOR inhibitor comprises rapamycin or a rapamycin derivative.
- 9. (previously presented): A method according to claim 8, wherein the rapamycin derivative comprises 40-O-(2-hydroxyethyl) rapamycin, 40-[3-hydroxy-2-(hydroxymethyl)-2-methylpropanoate}-rapamycin or 40-epi-(tetrazolyl)-rapamycin.
- 10. (currently amended): A method according to claim 3 7, wherein the cytotoxic agent is selected from an antineoplastic animetabolite, a platin compound, an alkylating agent, a topoisomerase I or II inhibitor, a microtubule active agent and irradiation.

11-13. (canceled)

- 14. (previously presented): A method for overcoming resistance to a cytotoxic agent in a subject treated with said cytotoxic agent, comprising
 - determining the level of p21 expression in a sample derived from the subject,
 - if p21 expression is upregulated after administration of a cytotoxic agent, administering to said subject an mTOR inhibitor in combination with the cytotoxic agent,

- determining again the level of p21 expression in a new sample derived from the subject after the treatment with the combination of the mTOR inhibitor and the cytotoxic egent, and
- If p21 expression is downregulated, further treating the subject with the mTOR inhibitor either concomitantly or sequentially with said cytotoxic agent.
